**Strange But True!**

The Virginia Opossum is a very strange creature indeed, and it might just live in your neck of the woods! It’s the only native North American Marsupial (that means it carries its babies in a pouch like a kangaroo) when the babies are born, they weigh just one-fifth of a gram - 2,000 newborn Opossums all together would weigh less than one pound! Opossums have a “prehensile” tail, which means they can use it like a hand to hang from tree branches!

**Sphenopalatine Ganglioneuralgia**

Try saying that 10 times fast . . . or even once! That’s the scientific term for a condition many of you might suffer from this summer: the “brain freeze” you get when you slurp an icy cold drink too quickly!

If you find a baby bird on the ground, and it has all or most of its feathers and does not look injured, leave it alone. Babies usually learn to fly from the ground up, and mom and dad are probably watching nearby. If the baby does not have any feathers or just a few, carefully put it back in the nest. It’s a myth that the parents will reject it if it’s been touched by a human — they won’t!
